Hanna Maksymuk | UI/UX Designer

maksymuk.h@gmail.com +1 438 466 53 43 Canada, Edmonton

About Me

UX/UI Designer specializing in accessible, human-centered design, with deep experience in public sector services and consumer mobile apps. I lead the full design process, from early research and stakeholder collaboration through prototyping, testing, and developer handoff, with a focus on building design systems and making complex services easier to use. My work has directly improved user completion rates on high-stakes public services, and I thrive in agile teams working closely with developers to turn ideas into shipped, accessible products.

Work Experience

UX/UI Designer, NeuroSoph **Sep 2023 – Present**

Design accessible digital products and internal systems for public sector clients, owning the process from client interviews and research through prototyping and production-ready handoff. Primary client: MassAbility, a Massachusetts state agency.

- Ran stakeholder interview sessions and created current- and future-state diagrams and prioritization maps to turn client needs into design priorities.
- Designed Assisted Intake for MassAbility, reducing application drop-off by 80% and earning strong user feedback for ease of use. Incomplete applications hand off seamlessly to case managers, who can continue them directly in their own case management system.
- Designed the Provider Platform for MassAbility, a reporting application delivered as four projects: career and student services reporting, Transitional Assistance, Supported Living, and Housing Search Entities.
  - Integrated the platform with MassAbility's OnBase system, giving providers and MassAbility a shared, transparent view of spending, allocated funds, and report approvals and rejections.
- Designed to WCAG 2.2, with sufficient color contrast, clear interactive states, and consistent patterns. Tested internally before client user testing to validate accessibility, business logic, and functionality, and incorporated client feedback into each iteration.
- Built and maintained a design system in Figma with components, variables, and a token library, used across two products and the company website. Documented it with Cursor AI and rebuilt it in Cursor so it can be reused for prototypes and product demos.
- Worked within client design systems and brand guidelines to build products that feel seamless within the client's ecosystem, and contributed to branding and identity work.
- Worked in design sprints tracked in Jira, partnering closely with developers on a full agile process to confirm technical feasibility and deliver production-ready designs. Presented product demos to stakeholders and wrote client-facing documentation and guides.

UX/UI Designer, Radar Nov 2021 – Mar 2023

Joined during an early stage of the design practice, with an unstructured Figma setup and no established component library, and executed the majority of the work on a full visual overhaul across both products. The role centered on visual design and building a design system from the ground up, alongside close collaboration with developers and the analytics team to refine key user flows.

- Designed app and web experiences for RadarSmart, a family location-sharing app, and Wemates, an insurance app.
- Executed the majority of design work on a visual redesign across both products, under the design lead's direction and collaborating with a content designer, a 3D designer, and another UX designer.
- Established a design system from the ground up, introducing reusable components and consistent visual patterns across apps and web.
- Partnered with the analytics team to identify friction points and improve conversion in key flows.
- Led the design work on adapting Radar Smart for one of Ukraine's largest mobile network operators, tailoring the product to the client's branding as part of a white-label integration.
- Designed mobile experiences following Apple iOS Human Interface Guidelines.

UX Designer & Web Designer (Consulting), TBSM May 2023 – Aug 2023

Short-term consulting engagement covering two work streams: a UX audit of an existing product and visual design for a new client website.

- Audited TBSM's investment product used by their clients, evaluating visual design, data visualization, and navigation, and delivered recommendations including improved chart and graph choices for financial data and a clearer navigation structure.
- Designed high-fidelity mockups for the client's new website, defining the visual direction and page layouts to give the team a ready-to-build foundation for the site rebuild.

Education

Kherson National Technical University 2017 – 2021

Bachelor of Science in Biomedical Engineering
